Chapter 18: Catalytic C-H Functionalization

Y. Shimizu

18.1. Overview

C-H activation: Catalytic or stoichiometric reactions of transition metal complexes with the unreactive C-H bonds of alkanes, arenes, or alkyl chains to form products containing a new metal-carbon bond. (Fiedel-Crafts reaction or ortho lithiation are not C-H activation.)

major challenge: •selective activation

•catalytic process

•terminal C-H bond functionalization (sec. or tert. C-H: radical approach)

•methane to methanol

Difficulties

•The reactions are thermodynamically unfavored in many cases.

Oxidation by many oxidizing reagents is downhill.

+ co
$$\rightarrow$$
 $\Delta H = 1.7 \text{ kcal/mol}$ (18.2)

$$R-H + HX \longrightarrow RX + H_2$$
 $\Delta H = 22 \text{ kcal/mol}$ for $R = C_6H_{11}$, $X = OH$ (18.3)

$$RCH_2CH_3 \longrightarrow R + H_2 \qquad \Delta H = 30 \text{ kcal/mol}$$
for $R = C_4H_2$

$$(18.4)$$

18.2. 18.3. Oxidations

Alkane		D found (%)	D in ^a			
	Time (h)		Me- (%)	-CH ₂ - (%)	-CH- (%)	
Methane	95	25				
Ethane	137	91	91	_	_	
Pentane	137	75	92	57	_	
2-Methylbutane	137	69	83	37	9	_ n

primary C-H selective

functionalization

Pt(IV) as oxidant : impractical

Periana's improvement

$$CH_4 + 2 H_2SO_4 \xrightarrow{Cat. (bpym)PtCl_2} CH_3OSO_3H + 2 H_2O + SO_2$$

$$(bpym)PtCl_2 = \bigvee_{N} \bigvee_{N} Cl$$

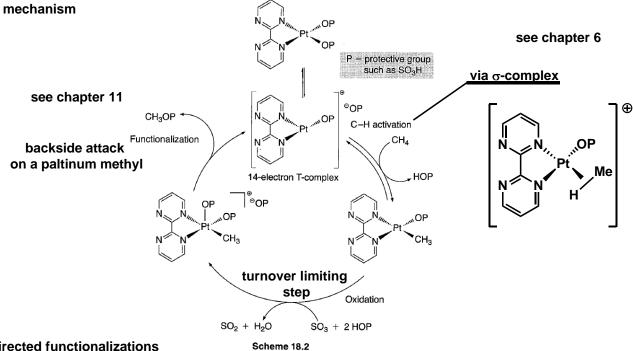

$$TOF = 10^{-2} s^{-1}$$

$$TON > 500$$

$$H_2SO_4: corrosive...$$

EWG: prevent the further reaction

cf. Polyoxometallate (H₄PV₂Mo₁₀O₄₀) can act as a mediator of oxidation by O₂.

Directed functionalizations

Role of directing group

- trigger C-H bond cleavage
- regioselective functionalization

Sames (Shilov's system)

Catalyst/oxidant	Yield	Syn: anti
